## Task 1 Digital Intelligence

- What new things did you learn from the video and article?

From the video, *Q and DQ World - Digital Intelligence Education for the Future Video* I learned tools are available to young internet users to better navigate and use the internet, utilizing Digital Intelligence Quotient, also known as DQ. The video explains that DQ World is a platform that is geared to help better their DQ. It is the abilities internet has and utilizes to deal with internet life. Their overall goal is to give children the foundation to be on the internet.

From the article, *'8 digital skills we must teach our children'* I learned about just how ingrained our society is on the internet making it vital for the youth to understand the internet. The article also highlights DQ, breaking this term down into 8 terms: digital identity, digital use, digital safety, digital security, digital emotional intelligence, digital communication, digital literacy, and digital rights. I learned that mastering these will allow internet users to use the internet properly.

- What DQ competency did you choose?

I chose privacy management. According to the website, this is defined as "The ability to handle with discretion all personal information shared online to protect one's and others' privacy."

- What type of knowledge, skills, values/attitudes are obtained from the competency?

Being proficient at privacy management means understanding an individual's right to privacy and keeping your private information secured. This also includes working on what information an individual chooses to share on the internet and what safety precautions are taken.

- Why would this competency be important to a Wai'anae Moku student?

This is important to a Wai'anae Moku student because often times we share computers in the lab and other people would have access to your information if you are not safe. It is also important to just college students and everyone in general because there is a lot people can do with your information from the internet, it is better to stay safe and protected.
